61.70%

### Skills

- Language Skills - HTML5,CSS3, Javascript, Typescript.
- Libraries and Framework - Angular, Bootstrap, Angular Material .
- Other tools - Git version control,Bitbucket,VScode.

- **Practice Analytics Module**

- This module is entry level of application which contains all information in dashboards and scorecards.
- This module will help to provide different kinds of information like patients and there forms, Providers,appointment status,timing,schedule and so on...
- In which i done code optimization, removed duplicate code like loops, removed direct functions call by replacing with code enhancement or used Angular Pipe.
- Maintaining and debugging code everyday which is assigned by tester.

- **Fitness Application**

- In this app I have implemented login page , signup page and welcome page.
- I have used latest version of angular material library i.e 15.2.2 .
- Also implemented lazy-loading for routing and added gurts for other components.
- Added authentication for login page and used other angular technique.

- **Constrotech app**

- Main intention of this project is to show all the information related to constructions based on city.
- As of now all top builders are having their own website.but this project will combine all the information of top 10 buliders from each city at a single point,so that user can easily find out quilty and well suited bulider by comparing.
- this project is also helps to provide all information related to construction, Architect,Authorised dealers for material and contractor in perticular selected cities.
- the whole application consist of different web pages which contains all information of a whole website.if user want to construct there own house bunglow this website is vary helpful.
- This application is mainly related to the construction and their equipments
